Smart Lockers for Personal Storage

Secure, personal storage for your employees and visitors

Smart Lockers for Personal Storage

Smart Lockers for Parcel Management

Smart Lockers for Inventory Management / Smart Asset Management Lockers

Smart Lockers for Retail

What is a Smart Locker?

Smart Lockers are an innovative combination of flexible workspace storage and the latest connected technology. They provide advanced storage solutions that offer 24/7 manageable access, end-to-end tracking of usage, new more efficient business processes, automation and full management reporting capabilities.

They have a variety of applications across your business to provide powerful and dynamic storage solutions, which do not compromise on security. With in-built software they automate time-consuming activities and introduce new efficient processes. Smart Lockers will transform the way you manage many aspects of your workplace, from managing incoming mail and parcels to controlling an inventory of valuable devices or equipment.

Smart Lockers also improve accountability, governance and enable connectivity with other smart devices for more flexibility and ease of use by users and facilities management. Much more than just a locker, our Smart Lockers give your business:

- Improved flexibility and usage
- Greater security and governance

- New processes and efficiency
- End-to-end user visibility and management
- 24hr access with different security options
- Reporting and accountability tracking

Why your business needs to think Smart

As businesses continue to work in new, and more agile ways, the needs of employees change too. A mobile workforce and visitors require an office environment that provides secure day storage space for their personal belongings.

Similarly, as flexible working increases, this also impacts on mail and parcel volumes coming into the mailroom, placing further pressure on existing business processes. Dealing with accountable mail and parcels requires a chain of custody, so locating employees who work flexible hours and locations can cause backlogs and inefficiencies.

Lastly, time spent handling valuable assets and inventory, such as stationery items, IT equipment or PDA's, can be reduced significantly and usage better monitored to reduce misuse and improve departmental cross-charging.

Where Smart Lockers can help your business

Ricoh Smart Lockers come with four key applications, to suit your business needs and future-proof your office space. Ricoh provide four key types of locker, which are all customisable to suit your office environment.

24/7 keyless access

Smart Day Lockers

With the introduction of agile working and hot-desking, your workforce require personal, and in some cases, team locker space. Smart Day Lockers offer secure temporary storage, whilst at the same time providing greater control of your property portfolio. With Smart Day Lockers employees are able to reserve a locker in advance via their mobile device, or on-demand via a touch screen console.

100% accountability

Smart Mail and Parcel Lockers

Smart Mail and Parcel Lockers enable today's mailroom to deal with increasing parcel and secure mail volumes easily, providing a new approach to distribution management. Offering end-to-end accountability, Smart Mail and Parcel Lockers increase convenience for your employees, and save on time and the workload of your mailroom staff. This solution enhances security and simplifies productivity chains.

Streamline management

Smart Inventory Lockers

Ricoh Smart Inventory Lockers can help with better governance of your business inventory including IT assets, consumables and stationery. By providing visible, self-service secure storage users can select and access stock easily. Smart security allows for easy tracking, reporting and cost centre billing.

Smart Asset Management Lockers

Smart Asset Management Lockers give you control of hand held devices, tools and calibrated instruments typically found in a warehouse environment. The cloud based system controlling the locker offers secure check-out and check-in, meaning you always know who has used a device, when it was returned and whether it is broken or damaged.

Click & Collect

Smart Locker for Retail

Click & Collect (or Delivery Orders) are used to pass items through a locker via a one-time delivery code and one-time pickup code. In the IT space the locker may be preloaded with replacement items or kits of items, or the delivery may take place after a specific request for equipment is made. Once the equipment is delivered to the locker and the user is approved to collect that item, the pick-up code is sent to the user (via email, text message or similar) who can enter it or scan it on a barcode reader, which in turn opens the relevant door allowing the collection of the appropriate items.

What makes a Locker Smart?

The technology that makes our Lockers Smart will revolutionise the way you see storage. Our management software enables end-to-end custody of mail, full accountability and visibility of ownership, and governance of your inventory. The keyless digital locking technology means that losing keys is no longer an issue, and Smart Lockers also connect easily with your IT network, existing applications and a multitude of devices.

Link with smart Apps - users can reserve storage from their smart device

Secure, keyless check in and check out

Smart Day Lockers

Ricoh Smart Day Lockers bring a unique solution to a common workplace problem. With the introduction of agile working and hot-desking, your workforce is increasingly mobile. Yet employees still require personal, and in some cases, team locker space. Managing this day-to-day, whilst auditing usage, dealing with locker hogging and lost keys all adds to the workload of the facilities team and frustrates the workforce.

Smart Day Lockers offer both secure temporary and permanent storage, providing your staff with a safe space for their personal belongings at the workplace, whilst at the same time providing greater control of your property portfolio.

With Smart Day Lockers employees are able to reserve a locker in advance via their mobile device, or on-demand via a touch screen console.

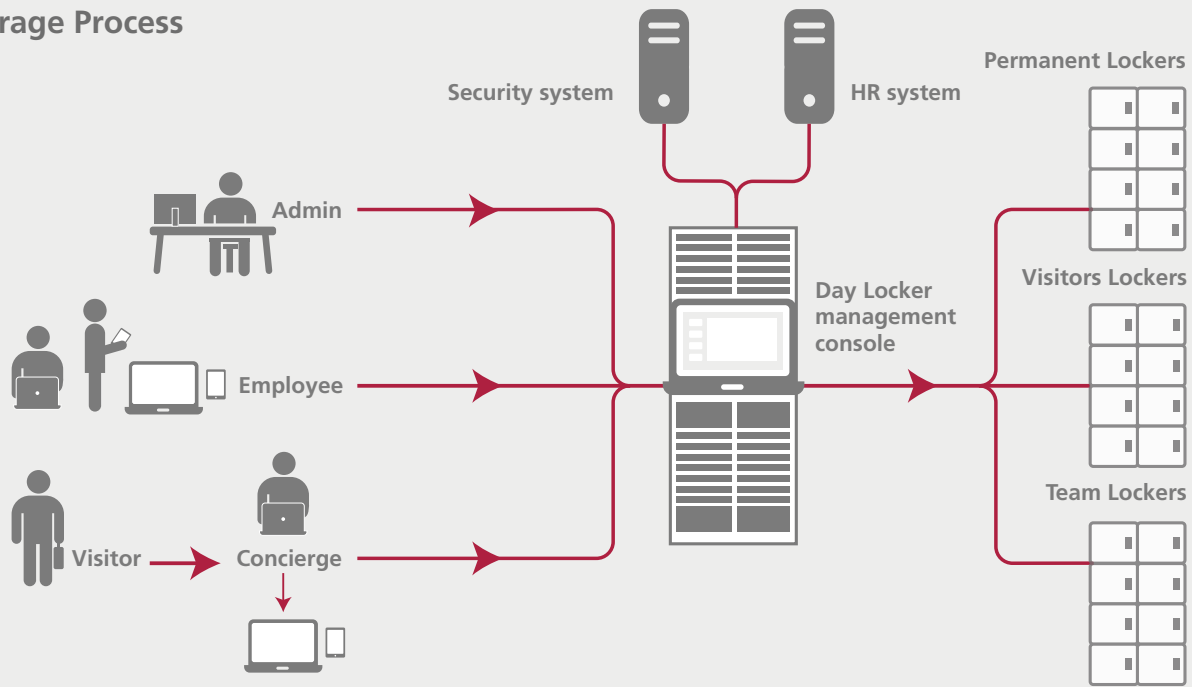

Benefits & Features

Ricoh Smart Lockers enable multiple storage locations to be managed from a single online portal. With a keyless entry system using only a keypad or ID pass/card, the lockers track who is using what, and for how long. You see at a glance how much of your estate is being used, and by whom, ensuring that all lockers are fully and correctly utilised.

Key benefits:

- Oversight of your locker real estate
- Allocation of individual lockers
- More efficient utilisation of your space
- Modular, extendable and customisable
- Keyless access
- Online booking facility
- Increased accountability and reduced hoarding
- 27/4 access (or whenever building is open)

Smart Lockers for Personal Storage Process

The technology behind Smart Lockers

Smart Lockers provide unique locking technology and facilities management, offering greater security for your employees and ease of management for the business. Management of units is centralised at a Locker Bank, which can only be accessed via secure RFID swipe card authentication or a touchscreen interface. This control interfaces with key-free access, touch screen and RF card readers, offering full accountability and security for all users.

Built to suit your needs

Whether you're a large enterprise, a manufacturing business, a university, hospital or school, our range of locker configurations

will help you optimise your property holdings and increase accountability. Our lockers come in a range of styles to suit your needs, whether it's stand-alone or networked and integrated.

Modular, extendable and customisable

The modular column design of the lockers enables them to flex according to your different layout requirements. The size of the lockers are also customisable, to accommodate different staff needs. With a variety of modern, classic and wooden finishes, expect a solution that seamlessly integrates with your existing workplace.
